

floating

Some clouds can be so close to the ground they are like fog.

What can you see that is floating?
Where is it going and where is it from?

What can you see?

Clouds can travel faster than 100 miles an hour.

Studying clouds is called
NEPHROLOGY

I wonder if you could float anywhere
where would you go?

Can you lie really still and imagine you are floating?
How does it feel?

Have you ever watched the stars at night?

Psalms 103:11 says "As high as the heavens are above the earth, so great the Father's love for those who fear Him"
Imagine as high as you can see, and then even further filled up with love just for you. The bible says that's what God's love is like.
